

## Cloud 66

Jem Camba - 2018-10-20 - in Hosted

*Build & deploy your full stack in the cloud (or on your own servers).*

---

[Cloud 66](#) is a “DevOps as a Service” platform with a special focus on containers (Docker) as well as Node and Rails apps. Their promise is that you can build, deploy & maintain any app on any cloud.

## Features We Love

- Pain free deployments
- Integrated CI pipeline for containers (Skycap)
- Excellent database support (backing up and restoring is a breeze)
- Ability to deploy to your own (non cloud) servers

## Setting Up Packet as a Provider

Coming soon!
